Know Your Risk
Californians at greatest risk for Tuberculosis Infection or Disease

- ✓ Born in a county with a high rate of TB* (not U.S., Canada, Australia, New Zealand, or Western or Northern Europe)
- ✓ Immunosuppressed, current or planned: HIV infection, organ transplant recipient, or treated with immunosuppressive meds
- ✓ Close contact to someone with infectious TB disease, anytime

*In this group an IGRA is preferred over the skin test.

If a test is positive and TB disease is ruled out, TB Infection treatment is recommended.

The Adult Risk Assessment for Health Care Providers can be found through the PROVIDERS page of www.ctca.org/
